

PRINT MASTER ENHANCEMENTS 1/7/87. v1.2

Some enhancements have been made to PrintMaster since we issued v1.0. This version, v1.2, has the following new features:-

1. The Poster program is now part of Ascprint.
2. Three new commands have been added to Ascprint.
 - oQPRINTm - Will produce NLQ (near letter quality) printing on standard printers.
Parameters- n=width multiplier 1 to 9
 m can be P for proportional printing, U for underlined and B for both.
 - oEND - Turns off Qprint.
 - oFINISH - Ends printing & prevents spurious text appearing at the end of the document.

Load "DEM04" into Ascprint and your wordprocessor for examples.

PrintMaster will also now work with MINI OFFICE II from Database software. Before typing in your text, please set the "CHARACTERS/LINE" from its default setting of 72 to 76. When saving your file onto the PrintMaster disc, save it as an ASCII file rather than a Mini Office II file.
