AMSTRAD CPC 464/664/6128

Pyroword is a Word-Processing and File Management System designed for AMSTRAD users of all types. It is a single program, simple enough to be learnt quickly by those not familiar with computers, and yet contains enough features for more advanced users to produce many types of sophisticated printing normally associated with more expensive software. Having Pyroword on any AMSTRAD disc transforms the disc into a total Word Processing and Full Printing System. No other software is required.

Pyroword loads from disc in about 10 seconds and is then ready for use. It provides a work space of over 30,000 characters in which to edit text files.

Pyroword is supplied with many LESSON files. By reading the files and studying the text, the Pyroword system can be quickly learnt.

On all systems Pyroword is totally memory resistant. There are no other files like help menus or overlays. Because of this it is fast, very fast, and very easy to use.
